ARS 44-4 Revised October 1965

UNITED STATES DEPARTMENT OF AGRICULTURE AGRICULTURAL RESEARCH SERVICE

Tables on Hatchery and Flock Participation in the National Turkey Improvement Plan

By States and Divisions, 1963-64 and 1964-65 and

U. S. Summary 1959-60 to date

U. S. COMMENT SERVAL REGORDS

HIGHLIGHTS

The average egg capacity of participating hatcheries, about 160,000 in 1964-65 as compared to 148,000 the previous year, is consistent with the trend toward fewer and larger hatcheries. Fewer hatcheries participated in 1964-65 than in the previous year, while the total egg capacity increased from 51.6 million the previous year to 52.3 million. The increase in egg capacity was due chiefly to the increase in the West North Central Region. A slight increase also occurred in the East North Central Region but all other regions showed decreases.

The number of participating flocks decreased about 8.5 percent from the previous year. However, the average number of birds per flock increased from 1,755 to 1,899 and as a result the total number of birds remained at about 3.7 million.

After an increase during the previous year, the percentage of reactors to the pullorum-typhoid decreased in 1964-65 to a new low of .002.
